DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 allowed.
2. Claim 20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:
Prior art failed to establish a deep trench capacitor having the required relationship between the center electrode and the outer electrode.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 17-19 and 21-23 rejected under 35 U.S.C. 103(a) as being unpatentable over Enders et al. (6,319,787) in view of Gambino et al. (6,194,755).

Regarding Claims 17-19, Fig. 5h of Enders et al. disclose a high surface area trench capacitor with electrodes 20 and 20' and insulating layers 27 and 25. Furthermore the electrode 20 sits in the center and electrodes 20' sit in the outer direction with insulating layers separating them. Enders et al. fail to disclose the required bottle-shaped trench structure and the required diffused buried plate structure. However, Gambino et al.

Art Unit: 2826

disclose a low-resistance salicide fill for trench capacitors where int Fig. 2. a bottle shaped trench capacitor structure with diffused buried plates 18.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required diffused buried plate and the required bottle-shaped trench structure in Enders et al. as taught by Gambino et al. in order to have a deep trench capacitor structure with increased area and performance.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 17 recites the limitation "buried diffusion plate" in that is electrically connected to center electrode. There is insufficient antecedent basis for this limitation in the claim.
